Rockey housekeeping

Clear ownership for cleaning work

Housekeepers execute their assigned tasks

Managers and admins supervise readiness

The local application

React and Vite provide six routes

Spring Security authenticates and checks roles

Services coordinate JPA and MySQL transactions

Four entities and retained history

User owns assigned cleaning tasks

Task links a worker and a room

Inspection records task, room and supervisor

Cancellation and deactivation retain rows

Prepared cleaning and inspection demo

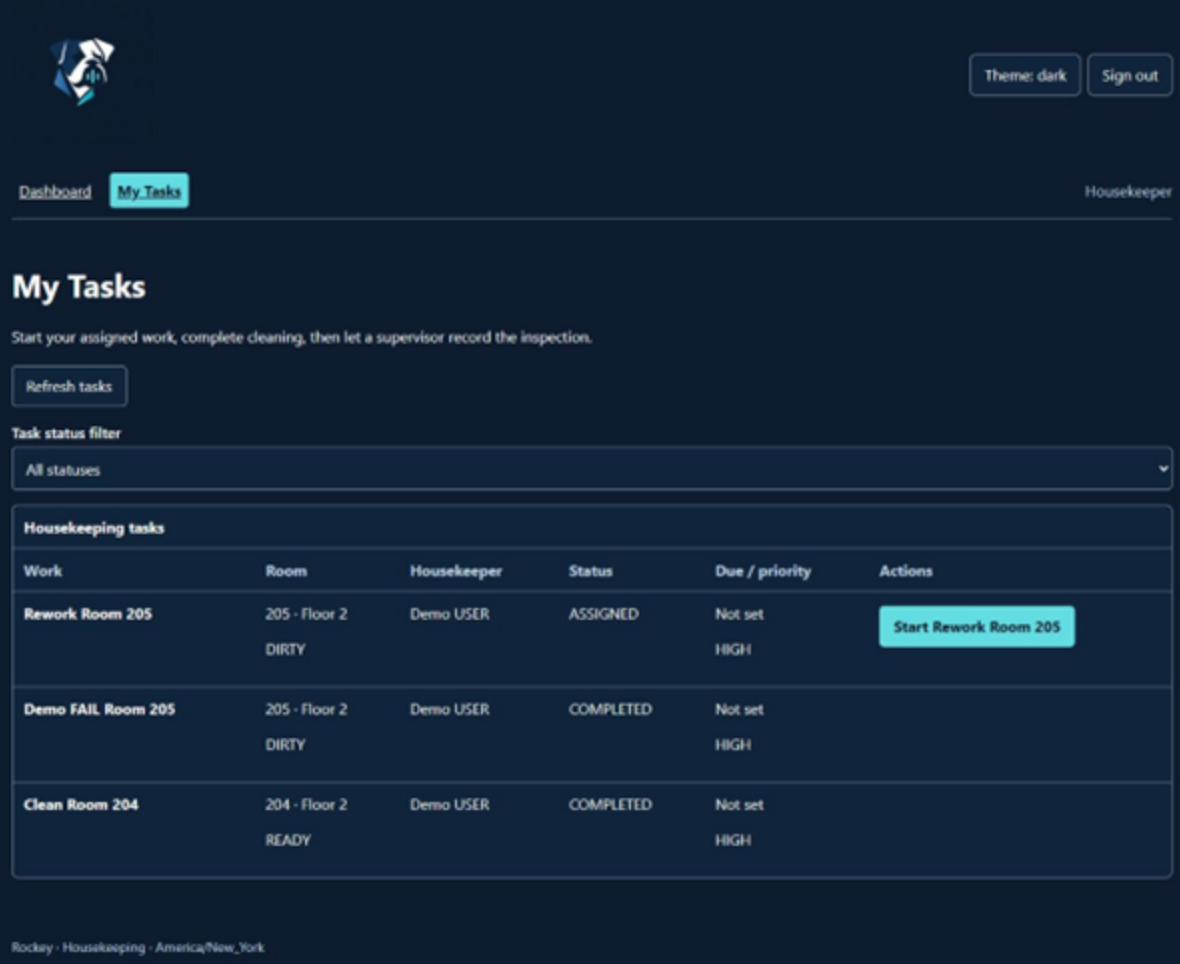

Room 204 shows completed work and READY

Room 205 retains FAIL and assigned rework

Use existing authorized views

Execute rework only with fixture approval

Screenshot captured October 11, before pagination. Current lists add Previous/Next page controls and a record count.

History and one rejected action

Show the retained inspection record

Explain why a supervisor inspects

Housekeeper access to Rooms is denied

Transactions, ownership and pagination

Service transactions keep workflow changes together

Ordered locks protect competing writes

Page rows and totals share authorization

Dashboard reads all scoped pages for counts

Lessons and required completion

Keep scope small and evidence precise

AWS is the only waiver

Sonar and Jenkins require authorized services

Deployment, protection and external artifacts remain
